## **Dependency Injection**

Step 1: Configuring pom.xml to add JUnit5 dependencies

```
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://maven.apache.org/POM/4.0.0
http://maven.apache.org/xsd/maven-4.0.0.xsd">
 <modelVersion>4.0.0</modelVersion>
 <groupId>UsingJUnit</groupId>
 <artifactId>UsingJUnit</artifactId>
 <version>0.0.1-SNAPSHOT</version>
 <dependencies>
    <dependency>
      <groupId>org.junit.jupiter</groupId>
      <artifactId>junit-jupiter-engine</artifactId>
      <version>5.4.2</version>
    </dependency>
     <dependency>
    <groupId>org.junit.platform</groupId>
    <artifactId>junit-platform-launcher</artifactId>
    <version>1.2.0</version>
  </dependency>
 </dependencies>
</project>
```

Step 2: Creating a JUnit class DependencyInjection

```
package com.ecommerce.tests;
import static org.junit.jupiter.api.Assertions.assertEquals;
import static org.junit.jupiter.api.Assertions.assertTrue;
import org.junit.jupiter.api.*;
import org.junit.jupiter.api.AfterAll;
import org.junit.jupiter.api.BeforeAll;
import org.junit.jupiter.api.Test;
import org.junit.jupiter.api.condition.DisabledIf;
import org.junit.jupiter.api.condition.EnabledOnOs;
import org.junit.jupiter.api.condition.OS;
import org.junit.platform.runner.JUnitPlatform;
import org.junit.runner.RunWith;
@DisplayName("JUnit 5 Dependency Injection Example")
@RunWith(JUnitPlatform.class)
public class DependencyInjection {
     DependencyInjection(TestInfo testInfo) {
     assertEquals("JUnit 5 Dependency Injection Example",
testInfo.getDisplayName());
  }
  @BeforeEach
  void init(TestInfo testInfo) {
     String displayName = testInfo.getDisplayName();
     assertTrue(displayName.equals("TEST 1") ||
displayName.equals("test2()"));
  @Test
  @DisplayName("TEST 1")
  @Tag("my-tag")
  void test1(TestInfo testInfo) {
     assertEquals("TEST 1", testInfo.getDisplayName());
     assertTrue(testInfo.getTags().contains("my-tag"));
```

```
@Test
void test2() {
}
```
